TCR BECOMES DISTRIBUTOR FOR COE PRESS EQUIPMENT

Wisconsin Rapids, WI—(June 6, 2008) TCR Inc., announced today that it has become a distributor for Coe Press Equipment Corporation. Coe provides a broad coil processing line and manufactures one of the heaviest and widest coil feeding systems available today for the metalforming industry.

By combining engineering knowledge and field experience with a comprehensive equipment lineup, TCR is able to provide stampers with flexible, fully integrated production solutions. Coe is a key addition to TCR's capability to provide total turnkey metalforming systems.

TCR Integrated Stamping Systems continues to break new ground as a turnkey provider and systems integrator for the metalforming industry. Helping customers make the right equipment and technology choices is only part of the unique package that sets TCR apart from other capital equipment providers. By first understanding its customer's goals, the TCR team is able to provide the most profitable stamping system solution. TCR technicians then install and integrate the equipment, conduct on-site training in operation and safety procedures and provide support long after the equipment is installed. TCR's lines include mechanical and hydraulic presses, press controls, guarding, die protection and tonnage monitoring, feedline equipment, die components and other production equipment. Flexible and innovative, TCR's high quality standards and select team of associates combine to provide manufacturers with the integrated solutions they need today for the marketplace of tomorrow.
